29. (New) A method of producing a personal care product having a biodegradable film comprising the steps of:

- providing a biodegradable polymer and a water soluble polymer;
- blending the biodegradable polymer and the water soluble polymer together to form a blended polymer mixture;
- producing a precursor film from the blended polymer mixture;
- stretching the precursor film from about 100 to about 500 percent of its original length while in contact with an aqueous solution;
- processing the precursor film into a biodegradable film; and
- applying the biodegradable film to the personal care product.
